B&W Soviet movie stock film

A-2SH is a black-and-white negative panchromatic/isopanchromatic film originally derived from Soviet cinematic film stock. It is designed for difficult lighting conditions and is successfully used in artistic photography for reportage, action and scenes with moving objects.

The film yields a distinct, expressive aesthetic with high contrast, deep shadows, pronounced grain and excellent sharpness. Its wide latitude allows good results in a variety of lighting conditions, making it ideal for those who want a dramatic, cinematic look.

ISO 400. Made in Ukraine.

KEY FEATURES

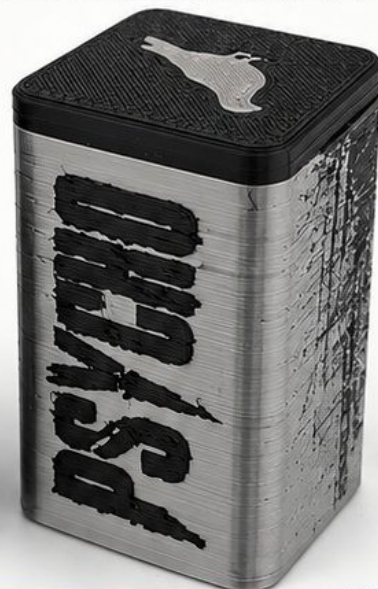

- Black & white negative film
- Panchromatic / isopanchromatic
- ISO 400
- High contrast with deep shadows
- Pronounced, crisp grain
- Exceptional sharpness
- Wide exposure latitude
- Made in Ukraine

PHOTOGRAPHIC PROPERTIES (A-2Sh)

Type	Black & white negative
Spectral sensitivity	Panchromatic / isopanchromatic
Rated speed	ISO 400
Base	Thin polyester base (clear)
Grain	Pronounced, classic film grain
Contrast	High contrast, deep shadows
Sharpness	Excellent resolution and detail
Application	Difficult lighting, reportage, action
Origin	Soviet cinematic film stock
Made in	Ukraine

HANDLING NOTES

- Thin polyester base is prone to light piping.
- Load in subdued light.
- Not recommended for cameras with automatic motorized rewind due to lack of a DX code and the physical traits of the bulk-cut stock.
- Can be processed in standard black-and-white chemistry (e.g., D-76).
