

SOLARIS

35mm FILM

BLACK & WHITE MOTION PICTURE STOCK

NK-2Sh

TYPE

ISO 100

The NK-2Sh is a medium-speed, panchromatic black and white motion picture film, made for those who see the world in shades of light and shadow. Moody, great for shadow work, and true to its roots as a cinema film, it delivers a distinctly dramatic, mid-century Soviet cinematic look.

With its thin, strong polyester base, the NK-2Sh offers high contrast, sharp detail and a classic cinematic tonal character. It performs beautifully in natural light and under enhanced lighting in the pavilion. Made in Ukraine.

KEY FEATURES

- Black & white negative film
- Panchromatic
- ISO 100
- Thin, strong polyester base
- High contrast and sharp detail
- Cinematic look with a classic mid-century feel
- Made in Ukraine
- Uses standard black-and-white chemistry

PHOTOGRAPHIC PROPERTIES (NK-2Sh)

General photosensitivity (So.1), units	not less than 90
Optical density of the veil	not more than 0.1
Recommended medium gradient	0.62
Resolution, R, mm-1	not less than 100
Limit of optical sensitization, nm	no more than 680
Maximum optical density	not less than 2.00

HANDLING NOTES

- Because of its thin base and clear backing, it is prone to light piping.
- Load in subdued light.
- Not recommended for cameras with automatic motorized rewind systems due to the lack of a DX code and the physical traits of the bulk-cut stock.
- Can be processed in standard black-and-white chemistry, such as standard Kodak D-76 processing.
